

# THE FATTY ACID DIFFERENCE

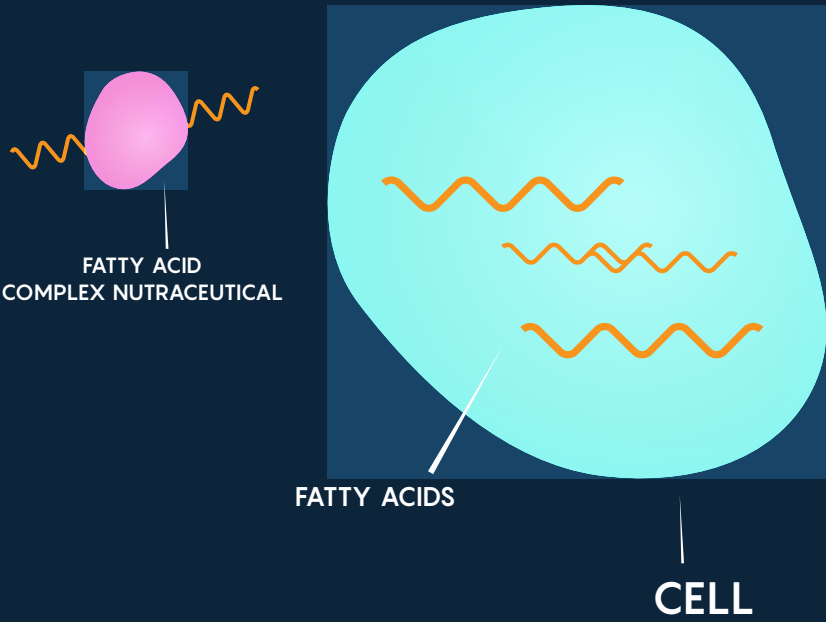

When nutraceuticals are formulated using fatty acids, becoming **fatty acid complex nutraceuticals**, the body is able to absorb more of their benefits.

## HOW IT WORKS:

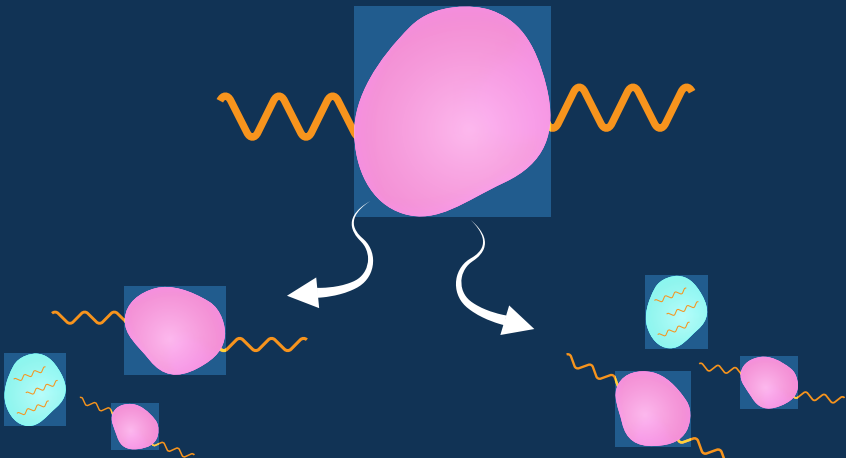

### 1 A FAMILIAR MAKEUP

Fatty acids are naturally present in the cells of the human body. When a fatty acid complex nutraceutical enters the body, the body recognizes its fatty acid parts.

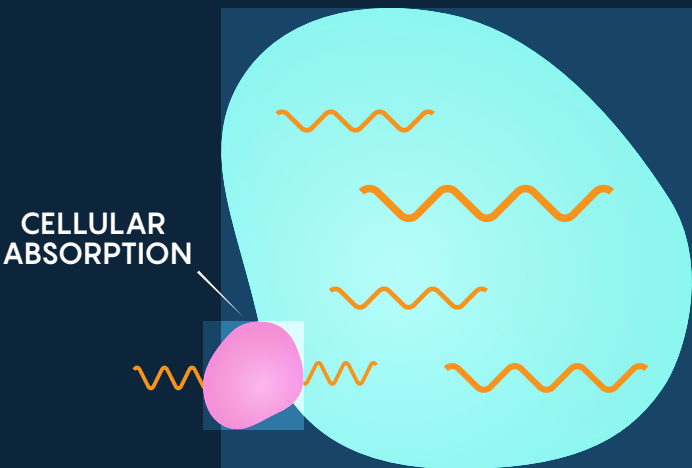

### 2 FASTER MOVEMENT

Since fatty acid complex nutraceuticals are readily accepted by the body, they can spread quickly through the body.

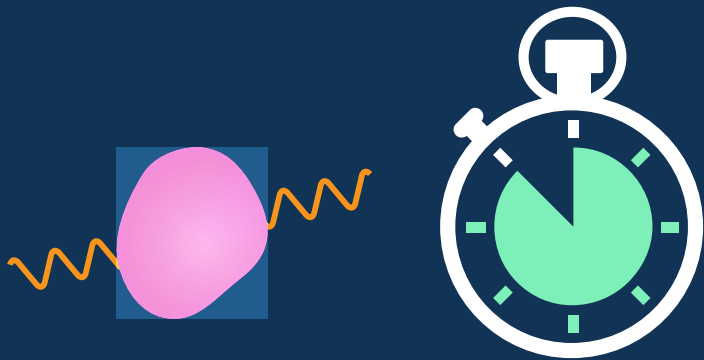

### 3 SUPERIOR ABSORPTION

While other nutraceutical ingredients are typically absorbed on an intestinal level, fatty acid complex nutraceuticals allow more of their beneficial nutrients to be absorbed on a cellular level.

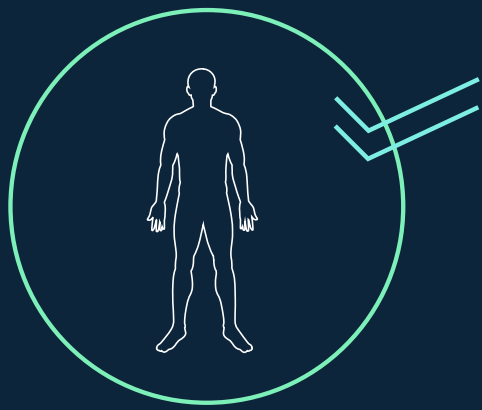

### 4 SAFER PROCESS

This safer way to quickly increase cellular uptake kinetics decreases the adverse side effects (nausea, cramping, etc.) traditionally associated with large nutraceutical doses.

### 5 MAXIMUM COSUMER BENEFITS

The bioavailability of fatty acid complex nutraceuticals is higher because more of their active ingredients are ultimately able to enter and circulate in the body.

## ONLY ONE INNOVATION LABS NUTRACEUTICALS

offer this kind of superior bioavailability because only One Innovation Labs nutraceuticals use this innovative, proprietary fatty acid formulation.

Ask your One Innovation Labs specialist about the wide spectrum of fatty acid complex nutraceuticals we offer.
